November 15, 1982

Dear Mr. Nicholson,

The North Dakota Department of Health has issued permit SW-260 to dispose of waste and excavated soil from the Artic Enterprises property in Moorehead, Minnesota. The uncured gel coat must be separated from the excavation soils and solidified in portland cement prior to disposal. The recovered barrels will be disposed of in bulk along with the excavated soils. This disposal is scheduled to take place November 19, 1982. I have attached copies of the permit, my letter requesting the permit, and all laboratory analyses submitted with the request.

This letter, with attachments, will be submitted to Doug Day of the Minnesota Pollution Control Agency for their review and approval.

Very truly yours,

James A. Kinsey
